DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on January 29, 2004 has been entered.

Claims 1-4 and 10 are pending.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 10 is rejected under 35 U.S.C. 103(a) as obvious over Mayer. (U.S. Pat. 5,783,333).

The rejection is maintained for the reasons of record and for the additional reasons not yet discussed in response to applicant's present amendment to the pending claims. Independent claims 1 and 10 have been amended to recite "a chemically bonded mixture" for the lithium nickel manganese oxides or lithium nickel cobalt oxides and lithium manganese oxides. Mayer

Application/Control Number: 09/775,315

Art Unit: 1745

is asserted to teach this feature, "[t]he various components are well mixed and then thermally reacted at a temperature of between about 500° and 1300° C". (col. 11 line 43-45)

Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pynenburg et al. (U.S. Pat. 5,429,890) in view of Hasegawa et al. (U.S. Pat. 5,370,948).

The rejection is maintained for the reasons of record and for the additional reasons not yet discussed in response to applicant's present amendment to the pending claims. As to "a chemically bonded mixture" for the lithium nickel manganese oxides or lithium nickel cobalt oxides and lithium manganese oxides, Pynenburg et al. is asserted to teach this feature as found in column 7 lines 4-9:

The mixed metal oxides are chemical reaction products generally formed by heating mixture of the appropriate oxides. The mixed metal oxides are not physical mixtures but are true examples of chemical mixtures, i.e. chemical compounds of arbitrary ratio.

Additionally, Hasegawa et al. similarly teaches chemically bonding of the mixture, [t]he powder was pre-heated (or pre-calcined) at a temperature of 300° C, in the air and calcined at a temperature of 800° C. in the air to obtain LiNi_{1-x}Mn_xO₂". (col. 3 line 34-36)

Response to Arguments

Applicant's arguments filed with present amendment have been fully considered but they are not persuasive. The examiner notes that applicant has defined "chemically bonded" as the effect of heating the reaction products. (Remarks/Arguments on page 3) The primary reference teachings of Mayer and Pynenburg et al. as well as the secondary reference teachings of

Application/Control Number: 09/775,315

Art Unit: 1745

Hasegawa et al. each as discussed above are asserted to specifically teach heating of the given materials.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Julian Mercado whose telephone number is (571) 272-1289. The examiner can normally be reached on Monday through Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Patrick J. Ryan, can be reached on (571) 272-1292. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0661.
